PROBLEM STATEMENT

- Small and marginal farmers lack access to timely, accurate, and location-specific agricultural information — such as weather, crop choices, pest control, and market prices — in a language they understand. This knowledge gap leads to poor farming decisions, crop losses, and reduced income.
- **Proposed Solution:**
An AI-powered Smart Farming Agent that uses Natural Language Processing (NLP) and Retrieval-Augmented Generation (RAG) to deliver real-time, location-specific agricultural advice to small and marginal farmers.
- The agent retrieves trusted information from government sources, weather services, and agritech platforms to provide guidance on:
 - Suitable crops based on soil, season, and weather
 - Pest and disease management (organic and chemical)
 - Fertilizer and irrigation recommendations
 - Current mandi (market) prices
 - Weather forecasts
- Farmers can interact in their local languages, ask natural questions, and receive simple, actionable advice, helping them make informed decisions that reduce risk and increase yield and income.

TECHNOLOGY USED

IBM cloud lite services

Natural Language Processing (NLP)

Retrieval Augmented Generation (RAG)

IBM Granite model

IBM CLOUD SERVICES USED

- IBM Cloud Watsonx AI Studio
- IBM Cloud Watsonx AI runtime
- IBM Cloud Agent Lab
- IBM Granite foundation model

WOW FACTORS – *AI AGENT FOR SMART FARMING ADVICE*

This agent empowers grassroots farmers with AI, providing real-time, localized, and multilingual farming advice that was previously inaccessible or difficult to understand.

It bridges the digital divide and helps farmers make better, data-backed decisions that directly impact productivity, income, and sustainability.

Unique features:

Multilingual support (Hindi, Marathi, etc.)

Location-based mandi prices, crop advice, and weather

Pest & fertilizer recommendations using local data

RAG-powered retrieval from a custom knowledge base

Natural language Q&A with simple, farmer-friendly responses

END USERS

- Small and marginal farmers
- Krishi Vigyan Kendras (KVKs) and local agri extension workers
- Agri-input dealers who assist farmers
- Agri-tech students or educators working on rural outreach

You: 11:35 AM

What crop is best for this season?

AI Kheti Sathi 11:35 AM

To provide the best crop recommendation, I need to know your location and the current season there. However, considering it's currently the kharif season in most parts of India, suitable crops include rice, maize, bajra (pearl millet), soybean, and cotton. Please share your district for a more precise suggestion. 🌾

You: 11:37 AM

What crop is best for loamy soil this season?

AI Kheti Sathi 11:37 AM

For loamy soil, which is moderately fertile and retentive, crops like wheat, gram, and barley do well during the rabi season. In the kharif season, you could consider maize or soybean. Remember, local weather conditions also play a crucial role. For a more tailored recommendation, please share your district. 💧 🌾

Deployed AI Agent

The screenshot displays the IBM watsonx interface for the AI Kheti Sathi agent. The top navigation bar includes the IBM watsonx logo, an 'Upgrade' button, and user information 'Shristi Shar'. Below the navigation bar, the breadcrumb trail reads 'Deployment spaces / AI_Kheti_Sathi / AI Kheti Sathi /'. The main heading is 'AI Kheti Sathi', followed by status indicators 'Deployed' (with a green checkmark) and 'Online' (in a grey pill). Three tabs are visible: 'API reference', 'Test', and 'Preview' (which is active). A 'New chat +' button is located on the right. The chat history shows a user query at 11:43 AM: 'What crops is best for this season?'. The AI agent's response, also at 11:43 AM, explains that it needs location and season information and lists common crops for the Kharif (June–Sept), Rabi (Oct–Feb), and Zaid (Mar–May) seasons. Below the response is a link '► How did I get this answer?' and a refresh icon. At the bottom is a text input field with the placeholder 'Type something...' and a send button.

S You 11:43 AM
What crops is best for this season?

AI Kheti Sathi 11:43 AM
To provide the best advice, I need to know your location and the current season there. However, generally, in the Kharif season (June–Sept), suitable crops for many parts of India include rice, maize, bajra (pearl millet), soybean, and cotton. In the Rabi season (Oct–Feb), wheat, mustard, gram, and barley are commonly grown. For the Zaid season (Mar–May), watermelon, cucumber, and muskmelon are popular. Could you please share your district so I can suggest the best crop for your region? 🌱

CONCLUSION

- The AI agent delivers real-time, location-specific advice on crops, pests, fertilizers, and mandi prices.
- It uses RAG-based retrieval to provide accurate, data-driven guidance from trusted sources.
- Designed for multilingual and simple interaction, making it accessible to small and marginal farmers.
- Helps improve yield, reduce risks, and boost farmer income, promoting smart and sustainable agriculture.

FUTURE SCOPE

- Voice support in local languages
- Offline or low-data mode
- Live weather API integration
- Use of satellite/IoT data
- Crop disease detection via AI
- Auto-generated farm reports
- Link to agri-experts/helplines
